

T_2 :

(1) $\cdot \quad \frac{1}{2} x^2 + y^2 = r^2.$

则:

$$\lim_{(x,y) \rightarrow (0,0)} \frac{x^2+y^2}{|x|+|y|} = \lim_{(x,y) \rightarrow (0,0)} \frac{r^2}{r(|\cos\theta|+|\sin\theta|)} = \lim_{r \rightarrow 0} \frac{r}{|\cos\theta|+|\sin\theta|}.$$

~~$|\cos\theta|+|\sin\theta|$~~ 因为 $|\cos\theta|+|\sin\theta| \geq 1 \quad (\forall \theta).$

故: $0 < \lim_{(x,y) \rightarrow (0,0)} f(x,y) \leq r \rightarrow 0.$

$\rightarrow \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^2+y^2}{|x|+|y|} = 0.$

(2) .

(2).

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^2 + y^2}{\sqrt{x^2 + y^2 + 1} - 1}$$

$$\text{令 } m = \sqrt{x^2 + y^2 + 1} \quad (m > 1).$$

$$\Rightarrow x^2 + y^2 = m^2 - 1.$$

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f(x, y) = \lim_{m \rightarrow 1} \frac{m^2 - 1}{m - 1} = \lim_{m \rightarrow 1} m + 1 = 2.$$

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^2 + y^2}{\sqrt{x^2 + y^2 + 1} - 1} = 2.$$

(3).

$$\text{令 } \frac{1}{2} x^2 + y^2 = r. \quad (r > 0).$$

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f(x, y) = \lim_{r \rightarrow 0} \frac{1 + r}{r} = \lim_{r \rightarrow 0} \left(\frac{1}{r} + 1 \right) \rightarrow +\infty.$$

$$\text{故: } \lim_{(x, y) \rightarrow (0, 0)} \frac{1 + x^2 + y^2}{x^2 + y^2} = +\infty.$$

(4)

由等价无穷小可知: 当 $(x, y) \rightarrow (0, 0)$ 时, $\sin(x^3 + y^3) \rightarrow x^3 + y^3$.

$$\text{故: } \lim_{(x, y) \rightarrow (0, 0)} \frac{\sin(x^3 + y^3)}{x^2 + y^2} = \lim_{(x, y) \rightarrow (0, 0)} \frac{x^3 + y^3}{x^2 + y^2}.$$

设 $x = r \cos \theta$, $y = r \sin \theta$. $(x, y) \rightarrow (0, 0) \Rightarrow r \rightarrow 0$.

$$\lim_{(x, y) \rightarrow (0, 0)} f(x, y) = \lim_{r \rightarrow 0} \frac{r^3 (\cos^3 \theta + \sin^3 \theta)}{r^2} = \lim_{r \rightarrow 0} r (\cos^3 \theta + \sin^3 \theta)$$

故:

$$\lim_{x \rightarrow 0, y \rightarrow 0} \frac{\sin(x^3 + y^3)}{x^2 + y^2} = 0.$$

(5). 因为 $x \rightarrow +\infty, y \rightarrow +\infty$.

~~x^2+y^2~~ . 故: $xy > 0$.

$$\text{故: } x^2+y^2 < (x+y)^2.$$

可得:

$$0 < (x^2+y^2) e^{-(x+y)} < \frac{(x+y)^2}{e^{x+y}}.$$

$$\lim_{(x,y) \rightarrow (+\infty, +\infty)} \frac{(x+y)^2}{e^{x+y}} \rightarrow 0.$$

故由夹逼定理得:

$$\lim_{(x,y) \rightarrow (+\infty, +\infty)} (x^2+y^2) \cdot e^{-(x+y)} = 0.$$

(6). $x \rightarrow 1, y \rightarrow 0$.

$$\text{故分子: } \ln(x+e^y) \rightarrow \ln 2.$$

$$\text{分母 } \sqrt{x^2+y^2}.$$

$$\rightarrow 1.$$

故:

$$\lim_{\substack{x \rightarrow 1 \\ y \rightarrow 0}} \frac{\ln(x+e^y)}{\sqrt{x^2+y^2}} = \ln 2.$$

T₃:

若 $\lim_{\substack{x \rightarrow a \\ y \rightarrow b}} f(x, y) = A$ 存在.

$\forall \varepsilon > 0, \exists \delta > 0, \forall M(x, y) \in E \setminus \{M_0\}.$

满足 $M \in O(M_0, \delta) \Rightarrow \forall (M, M_0) < \delta. \Rightarrow$

$$|f(x, y) - A| < \varepsilon.$$

$$\overline{\{ (M, M_0) < \delta \}};$$

且 $\lim_{y \rightarrow b} f(x, y) = \varphi(x)$ 存在, 证明:

$\forall x \in a$ 附近 $\lim_{y \rightarrow b} f(x, y).$

且 $\lim_{y \rightarrow b} f(x, y) = \varphi(x)$ 存在, 证明:

$\forall x \neq a$ 固定. ~~$\lim_{y \rightarrow b} f(x, y)$~~

$$\forall \varepsilon_2 > 0, \exists \delta_1 > 0, \text{ s.t. } 0 < |y - b| < \delta_1, |f(x, y) - \varphi(x)| < \varepsilon_2.$$

故: 我们可得 $\forall \varepsilon > 0, \exists \delta_2 = \min\{\delta, \delta_1\}$ s.t.

$$|x - a| < \delta_2, |y - b| < \delta_2.$$

此时成立. $\forall M$ 满足 $\mathcal{O}(M, M_0) < \delta$.

可得: $|f(x, y) - A| < \varepsilon_1, |f(x, y) - \varphi(x)| < \varepsilon_2.$

故: ~~$f(x, y)$~~ $|\varphi(x) - A| < |\varphi(x) - f(x, y)| + |f(x, y) - A|$

取 δ_1, δ_2 使得 $\forall \varepsilon > 0, \exists \delta_2 = \min\{\delta, \delta_1\}$, s.t.

$$|x-a| < \delta_2, |y-b| < \delta_2.$$

此时成立. $\forall M$ 满足 $\mathcal{O}(M, M_0) < \delta$.

可得:

$$|f(x,y) - A| < \varepsilon, \quad |f(x,y) - \varphi(x)| < \varepsilon_2.$$

故:

$$\cancel{f(x,y)} \quad |\varphi(x) - A| < |\varphi(x) - f(x,y)| + |f(x,y) - A|$$

故可得: 二次极限存在. 且

$$\lim_{x \rightarrow a} \lim_{y \rightarrow b} f(x,y) = \lim_{\substack{x \rightarrow a \\ y \rightarrow b}} f(x,y) = A$$

15. (1)

当 $x=y$ 时, $\lim_{(x,y) \rightarrow (0,0)} f(x,y) = \frac{x^4}{x^4 + 0} = 1$.

当 $2x=y$ 时, $\lim_{(x,y) \rightarrow (0,0)} f(x,2x) = \frac{4x^4}{4x^4 + x^2} = \frac{4x^2}{4x^2 + 1} = 1 - \frac{1}{4x^2 + 1}$.

当 $x \rightarrow 0$ 时, $\lim_{(x,y) \rightarrow (0,0)} f(x,2x) = 0$.

此时可得: $\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f(x,y)$ 不存在.

即 = 重极限不存在.

此时可得:

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f(x, y) \text{ 不存在.}$$

即 = 重极限不存在.

$$f(x, y) = \frac{x^2 y^2}{x^2 y^2 + (x-y)^2} = \frac{x^2}{x^2 + \left(\frac{x}{y} - 1\right)^2} \quad \forall x \neq 0. \text{ 固定.}$$

$$\text{此时, } \lim_{y \rightarrow 0} f(x, y) = \varphi(x) \rightarrow 0.$$

$$\text{故: } \lim_{x \rightarrow 0} \varphi(x) = \lim_{x \rightarrow 0} 0 = 0.$$

$$\text{即 } \lim_{x \rightarrow 0} \lim_{y \rightarrow 0} f(x, y) = 0. \text{ 同理, } \lim_{y \rightarrow 0} \lim_{x \rightarrow 0} f(x, y) = 0.$$

即 = 次极限相等且为 0.

故: $\lim_{x \rightarrow 0} \varphi(x) = \lim_{x \rightarrow 0} 0 = 0$.

即 $\lim_{x \rightarrow 0} \lim_{y \rightarrow 0} f(x, y) = 0$. 同理, $\lim_{y \rightarrow 0} \lim_{x \rightarrow 0} f(x, y) = 0$.

即 = 次极限相等且为 0.

② (2):

= 重极限: $x \rightarrow 0$ 时 $\frac{1}{x} \rightarrow +\infty$ $|\sin \frac{1}{x}| \leq 1$.
 $y \rightarrow 0$ 时, $\frac{1}{y} \rightarrow +\infty$ $|\sin \frac{1}{y}| \leq 1$.

故: $0 < \lim_{(x, y) \rightarrow (0, 0)} |f(x, y)| < |x+y| \rightarrow 0$.

故: = 重极限为 0.

by 题, $x \rightarrow 0$ 时, $\sin \frac{1}{x}$ 无意义. 故 = 次~~重~~极限不存在.

定理

T6: (1) 定义域 $x^2+y^2 > 0$ 且 $x^2+y^2 \neq 0$

故: $\forall M(x,y)$ 均可以使 u 成立. 除了 $(0,0)$.

且 u 为初等函数的基本组合. 故: u 在 $\mathbb{R}^2 \setminus \{(0,0)\}$ 上连续.

$M(0,0)$ 处无定义. 故: $(0,0)$ 处不连续.

(2) 定义域 $1-x^2-y^2 > 0$.

即 $x^2+y^2 < 1$ 上有定义. 且 $\ln$ 函数为初等函数. 故:

$u = \ln(1-x^2-y^2)$ 在定义域内连续.

故: u 在 $\{(x,y) \mid x^2+y^2 < 1\}$ 上连续.

在 $\{(x,y) \mid x^2+y^2 > 1\}$ 上不连续.

18: 在区域 $x^2+y^2 > 0$ 和 $x^2+y^2=0$.

当 $x^2+y^2 > 0$ 时.

$$f(x,y) = \frac{x^2 y}{x^4+y^2} = \frac{t^3 \cos^2 \theta \sin \theta}{t^4 \cos^4 \theta + t^2 \sin^2 \theta} = \frac{t \cos^2 \theta \sin \theta}{t^2 \cos^4 \theta + \sin^2 \theta}.$$

若 ①: $\cos\theta = 0$. 则: $f(x, y) = 0$.

$$\text{②: } \cos\theta \neq 0. \text{ 则: } f(x, y) = \frac{\frac{\sin\theta}{t\cos^2\theta}}{1 + \left(\frac{\sin\theta}{t\cos^2\theta}\right)^2}.$$

$$\text{取 } m = \frac{\sin\theta}{t\cos^2\theta} \rightarrow +\infty, (t \rightarrow 0)$$

$$f(x, y) = \frac{m}{1+m^2} = \frac{1}{m + \frac{1}{m}} \rightarrow 0, (t \rightarrow 0).$$

故: $f(x, y)$ 在 $(0, 0)$ 处沿每条射线连续.

$f(x, y)$ 在 $(0, 0)$ 处.

$$\text{取 } y = kx^2. \quad \lim_{x \rightarrow 0} f(x, kx^2) = \frac{kx^4}{x^4 + k^2x^4} = \frac{k}{1+k^2}.$$

此时, $f(x, y)$ 在 $(0, 0)$ 处的值与 k 有关, 而不是定义中的 0.

故: $f(x, y)$ 在 ~~在~~ $(0, 0)$ 处不连续.

①

Th: $x = x(t)$ 以及 $y = y(t)$ 在点 t_0 处连续.

且 $x(t_0) = x_0$.

$$\forall \varepsilon_1 > 0, \exists \delta_1 > 0, \text{ s.t. } 0 < |t - t_0| < \delta_1$$

$$y(t_0) = y_0$$

$\Rightarrow$

$$|x - x_0| < \varepsilon_1$$

$$|y - y_0| < \varepsilon_1$$

~~故: 我们可以得到~~

同时我们得到 $f(x, y)$ 在 (x_0, y_0) 处连续.

故: ① $f(x, y)$ 在 (x_0, y_0) 处有定义.

$$\textcircled{2}: \lim_{\substack{x \rightarrow x_0 \\ y \rightarrow y_0}} f(x, y) = f(x_0, y_0)$$

s.t.

当 $|x - x_0| < \delta$ 且 $|y - y_0| < \delta$ 时

62: ① $f(x, y)$ 在 (x_0, y_0) 处有定义.

$$\textcircled{2}: \lim_{\substack{x \rightarrow x_0 \\ y \rightarrow y_0}} f(x, y) = f(x_0, y_0)$$

s.t.

即 $\forall \varepsilon > 0, \exists \delta_2 > 0, 0 < |x - x_0| < \delta_2 \wedge |y - y_0| < \delta_2$ 时.

$$|f(x, y) - f(x_0, y_0)| < \varepsilon$$

取 $\varepsilon_1 = \delta_2$, 取 $\delta = \min(\delta_1, \delta_2)$. 则:

$\forall \varepsilon > 0, \exists \delta > 0, \text{ s.t. } 0 < |t - t_0| < \delta$.

满足

$$|f(x(t), y(t)) - f(x(t_0), y(t_0))| < \varepsilon.$$

故: $f(x(t), y(t))$ 在 t_0 点连续.
